SUMMARY

Java Full Stack Developer with **1.5+ years of experience** building scalable web applications using Spring Boot, React.js, and MySQL. Experienced in developing RESTful APIs, implementing secure authentication using Spring Security, and optimizing backend performance. Proven ability to deliver end-to-end features, debug complex issues, and improve application reliability in production environments.

EXPERIENCE

Associate Software Developer – Vinorise Technology

Feb 2025 – Present

- Developed and maintained **RESTful APIs using Spring Boot**, handling authentication, CRUD operations, and data processing
- Implemented **secure login and role-based access control using Spring Security**
- Integrated backend services with **MySQL database**, optimizing queries for better performance
- Collaborated with frontend team (React.js) to ensure **smooth API integration and data consistency**
- Improved application responsiveness by identifying and fixing **performance bottlenecks and edge-case bugs**
- Actively participated in **debugging, code reviews, and production issue resolution**

Web Development Intern – ITJobxs

Aug 2023 – Dec 2023

- Built a **responsive webpage** using **Reactjs and JavaScript** making the interface work smoothly across different screen sizes.
- Worked on **user verification flows** and helped improve how the platform handled suspicious or low-quality activity.
- Contributed to reducing **spam posts and bot interactions** by supporting validation and security-related improvements.
- Added **Google reCAPTCHA** as part of the verification process to strengthen platform security.

PROJECTS

Garden Fever – Spring Boot, ReactJs, MySQL, Docker

- Built a full-stack platform for renting and purchasing agricultural tools and services
- Developed backend using **Spring Boot and Hibernate**, exposing REST APIs for product and user management
- Implemented **role-based authentication using Spring Security**, ensuring secure access for admins and users
- Designed and managed **MySQL database schema** for efficient data handling
- Dockerized the application for **easy deployment and environment consistency**
- Enabled admin features like **adding, updating, and deleting product listings**

My Helper – HTML, CSS, JavaScript, PHP

- MyHelper is a home services platform that connects users with verified professionals like plumbers, electricians, and cleaners.
- Designed for convenience, especially for those new to a city, it simplifies finding trusted experts. Users can easily book services, track progress, and receive timely assistance.
- The platform is built using **HTML, CSS, JavaScript, and PHP, with MySQL** as the primary database for managing service requests, user profiles, and bookings.

TECHNICAL SKILLS

- Languages: Java, SQL, JavaScript, C, C++
- Frontend Technologies: HTML5, CSS3, React.js, Bootstrap, Tailwind CSS, Redux Toolkit, React Hooks, Axios
- Backend Technologies: Spring Boot, Core Java, Advance Java, J2EE, Spring MVC, Spring Security, RESTful APIs, JSP, Microservices Architecture, JWT authentication
- Databases: MySQL, MongoDB
- Tools: Git, GitHub, MySQL Workbench, Postman, Docker, AWS (EC2, S3), Figma, VS Code, IntelliJ IDEA / Eclipse, STS
- Operating Systems: Windows, Linux

EDUCATION

- PG-DAC — Post Graduate Diploma in Advanced Computing - Sunbeam Info-Tech Pvt Ltd, Karad Aug 2024 – Feb 2025
CGPA: 7.0
- Master of Computer Applications (MCA) - Madhav Institute of Technology & Science, Gwalior Aug 2021 – Jul 2023
CGPA: 9.1

CERTIFICATIONS & ACCOMPLISHMENTS

- NPTEL Certified – Cloud Computing
